

"Don't feed the brain killer!" – *From the new Swedish Techno Zoo*

The radiation from cell phones and mobile base stations is identical with most kinds of radar radiation. Radiation from a mobile phone is many times greater than the radiation in the vicinity of Radar stations where there has been a big rise in cancer and mortality.

Microwaves from cell phones and mobile base stations can make a 5% active cancer, become a 90% active cancer.

In England people talk about the "cancer street" phenomenon after great rises in cancer incidents in the wake of mobile base stations.

Active citizens around the world have succeeded in removing mobile base stations from schools and stopping new 3G/UMTS mobile base stations, especially in Denmark, Spain and other European countries.

Take a stand for life and make an impact before it gets too late !

Pass on this message to all who are affected by the radiation.

**Microwave radiation
is rapidly draining your
life force, health and zest**

in what Professor Leif Salford from Lund University calls;

**The Greatest
Biological
Experiment on**

Human Beings Ever !

Microwave radiation is a silent killer eating your life away

The amount of harmful, technical electromagnetic radiation we are subjected to, has increased more than 40-fold in the last 25 years.

The radiation emitted by a cell phone is 2 billion times stronger than the natural background radiation.

An operating mobile phone can be detected 100 km's away. Human brain waves are disturbed and distorted within a distance of 90 metres from a cell phone.

It is dangerous to health to stay within 400 m from a mobile base station, especially for children, youth, elderly or sick people.

Children and youth are about three times more exposed and vulnerable to irreversible damage from microwave radiation because their brain, immune system and organisms are not fully developed.

At least 40 years of scientific research documenting the harmful effects of electromagnetic and in particular microwave radiation, is neglected, denied and purposely suppressed by both cell phone companies and authorities alike.

The permit limit for microwave radiation has not been determined by doctors and biologists, based on trials on animals and humans, but by technicians and solely from the amount of radiation it takes to warm up a bag of sugar water with 1 degree Celsius.

The current threshold level for microwave radiation is based entirely on the heating effect of the radiation, even though a lot of serious damage happens in humans and other living organisms long before a rise in temperature takes place.

The present threshold level for microwave radiation is more than 10.000 times higher than the level where serious cell changes and damage on the DNA takes place.

Professor Neil Cherry from New Zealand has concluded; "There is no safe threshold level. The only safe exposure level is zero!"

Microwave radiation is about to turn young cell phone users

into premature senile weaklings within this decade.

Most of the radiation from a mobile phone is absorbed by and causing serious damage to the brain.

Microwave radiation permeates the blood/brain barrier and causes a great range of environmental toxins in the blood to enter the brain, resulting in lots of dying brain cells, early senility, cancer, ALS, Sclerosis, Alzheimer's and Parkinson's syndrome.

Microwave radiation is severely damaging the hormone producing glands, such as the pineal gland in the brain, whose production of the highly cancer arresting substance, melatonin, is destroyed. This results in impurity of the blood and rapid growth of cancer cells.

There is a deep connexion between microwave radiation from cell phones and mobile base stations and the growing incidence among children of such things as ear pain, tinnitus, headaches, infections and inflammations, as well as the epidemic spread of asthma and autism in very young children.

Microwave radiation causes DNA breakage and sterility.

Microwave radiation typically causes unrest, tiredness, stress, irritability, forgetfulness, lack of concentration, sleep disorders, learning and communication problems, closedness, depression, resignation, negativity, violent behaviour, headache, discomfort, dizziness, nausea, tinnitus, cardio-vascular problems, hardness, cold

Which of the above brains is irradiated?

Which one would be functioning the best?

Could there be health dangers by the many spots in the brain?
