

## NON IONISING RADIATION V HEALTH

### UPSIDEDOWN THINKING – CAGED, UPSIDE DOWN, HIGH CONSENSUS, FRAGMENTAL, LOGIC (CUDHCFL)

This document is the latest update on my investigations and on the data and information that has been sent to me.

The main objective is to be helpful to improve government decision making processes and I hope that they come, as Gordon Brown has indicated, with more humility, less image enhancing, less wishful thinking and more respect for leading scientists, who have spent many years studying their specialist subjects.

Inside this well hardened cage, the happenings in the world do not appear rational and *a world of illusion is created.*

Key - *Italic is an illusion* - Normal is substantially real

E.g. there is no effect on health due to non-ionising radiation. (as a broken record)

*Therefore no illness can be caused by this radiation.*

*i.e.* electromagnetic hypersensitivity *has not got a physical cause and is imaginary*, although it is estimated that 3% of the population now have it, this is around 2 million in the UK and the numbers are increasing.

Since they *are not officially ill* there are only 2 doctors in the UK who can provide some ameliorative treatment. *The NHS does not need to get ready for illnesses that are merely imaginary!*

People who defend their houses against this radiation *are doing it merely because of their imagination*

Parliamentarians have said *there is hate on the net*. This means they are in the upside down fragmental logic cage and cannot differentiate between scientific truth and untruth, due mainly to ignorance of biophysics and biochemistry. I feel there is **much** more scientific truth on the net, and in books, than in Parliament on these subjects.

30 volts per meter at the phone user's ear, because of most people's very effective immune systems, takes about up to 15 years to show, in a very dominant way, what can go wrong. However although you may think 1 volt per metre on your pillow will have much less effect, this is not so, because your body perceives it as a stress, and melatonin is suppressed by 87% in 4 months, when sleeping in a beam patch (Scheiner2006). Your immune system is suppressed and so illness comes much sooner, as cancer in 5 years, for a proportion of the people that increases as the years go by (Naila 2004).

E/m field measurements were taken for many schools and the results well presented on the net, but they did not check the health of the children, it was **a half done job**. They behaved as if nobody who is paid by the government wants to find the truth of the situation. In the checks on child health the effect of a nearby mast is very obvious.

In Israel they tore down the masts because they knew the illusion is not true.

I know a hospital where mast radiation is beamed into their cancer ward in spite of evidence that it reduces the effect of Tamoxifen and retards the healing of its patients.

The manufacturers claim that tetra is not low frequency modulated. What they mean is the dc level of the signal does not change throughout the cycle, but when the signal is received it shows a strong low frequency modulated wave!

In fact when one understands what is going on, it seems like the mad hatter's tea party of Lewis Carroll?

### CITIZENS OF THE WORLD

The phone companies pretend that the cases of illness are *not* universal, but radiation is radiation, people are people, and the effects are real and they are world wide.

Clusters of people living in beam patches of 1 volt per metre, *are not having* their melatonin circadian rhythm suppressed at night, their immune system suppressed, and are very open to

illness (Naila) showed high incidence cancer in years 5 to 10 ***the patches are merely random and not indicative of causation?***

Areas of people living in 0.13 volts per metre which is a much larger area than the beam patches (about 40 houses) and hence have more houses (about 2000 houses) like this, ***have not got*** 6 times increased tendencies for depression and hence mental illness [Navarro/Oldfeld further aspects of a Spanish study] The level of mental illness is rising why does the government exclude this source?

#### **SCIENTISTS WORK IS BEING IGNORED**

Dr. Gautier's flow diagram [2007] for the processes showing how non ionising radiation affects the bodies of humans, animals etc.

Dr. Cherry's thesis and presentation to the European Parliament in 2000

Dr Carlo's work (with 300 researchers) on the crippling of cell detoxification and much more.

Associated Prof Johansson's work, and much other relevant work

Barrie Trower, who was trained by the War Office in microwave warfare, says "the government will kill more people in peacetime than have been killed in war time" He knows both intellectually and emotionally but, in this upside down cage, ***does this mean nothing?***

Dr Maria Tamara a co director of the Safe Wireless Initiative concentrates on healing modulated electromagnetic non ionising radiation caused illnesses including the crippling of cell detoxification.

She states that this illness is one of the main threats to children's lives in the future. ***Does this mean nothing in the hardened upside down caged logic?***

People should and do respect their governments for their good capabilities, ***but cannot respect the governments for their scientific naiveté***, as shown by their acceptance of the ICNIRP (International Committee on Non Ionising Radiation) conclusions.

ICNIRP had apparent prestige, but it is not omniscient or omnipotent, it did not realise that our bodies at the cellular level are made in a wondrous way with liquid crystals surrounding cells which do send and receive weak electric signals.

They set guide lines at 42 volts per meter which were ***not*** a million times too high in terms of  $\mu\text{w}$  per meter<sup>2</sup> units and 1000 times too high in volts per meter units.

Also the government accepted the marketing ploys of the mobile phone industry that pretend that fact ***is fiction*** and have taught the parliamentary parties ***this***. It is so easy to pretend that scare facts are ***scare stories***. The government does not accept the unreality of this because it is staggeringly weak on biophysics, biochemistry, catastrophic theory and the Johari window. It then passed laws bad for health and opened ***a silent civil war on innocent unsuspecting people***.

These very high guidelines encourage honest engineers to design and construct dangerous equipment which is sold to unsuspecting innocent customers, such as DECT phones which are continually scanning, and which give higher fields than masts of 1 volt per meter at 1 meter, as well as Wifi, and metal rails resonating in bedrooms etc. A Leviathan ***may*** have been let loose when broadcasting companies emit high resolution digital television which will have very sharp waveforms. It would be better to send it to satellites and even better to transmit it by optical cables.

The purpose of the document is to let most of the western world governments see their mistake and show some compassion and some humility. Also the size of the consensus means "***truth politically***", but when misleading has occurred, there is an image generated that is ***untruth scientifically***.

The Swedish government has set a good example with its compassionate treatment of electromagnetic hypersensitive people under UN 22. The Taiwanese government has shown compassion on its people by taking down more than 900 badly sited masts. Because Taiwanese epidemiology has not been wrecked like it has in the western world, that had an irrational reaction to

the data protection act and decided to mix, small area illness clusters, with large good health low radiation areas, and hence hide the bad ones.

There is a sense that most western world governments are ignoring nature (shades of King Canute!) and asserting that true scientists are *not* true scientists and that much true scientific work *is not true*. The excess number of deaths are rising. 80% of the bees have gone in USA. Bees can have their immune systems suppressed as well as humans. Humans are bigger and so should last longer.

I learnt when I gave my lecture under the auspices of Athens University at the request of Dr Lucas H Margaritis Professor of Cell Biology, that there are fundamental mechanisms of life which apply to people, animals, birds, bees and bacteria. Trees and plants are not excluded from this. The first group can have suppression of the immune system and can be very vulnerable to early high incidence illness. They all can have crippling cell toxification.

Where is it likely that erroneous thinking lies? Is it in most governments in the western world with their vested interests, or is it in the minds of a substantial proportion of scientists trained in the above disciplines?

My certainty about the above subject is reinforced by when ever I do ungrounded thinking, like assuming a mast is higher than it is, or the poles are not angled much more than normal as they are, I find good correlation vanishes, however if I check and correct this data I have always had good correlation and prediction of illness from simulated field strength so far.

I would like to be regarded as a helpful prophet or oracle on this subject which I have focussed on for 4 years after 42 years in scientific research on mathematically similar problems. . My headmaster at Bishop Vesey's Grammar School told me 60 years ago that if other people do wrong it is no excuse for me to do wrong. Imagine my surprise when I realised that most western world governments were living in a scientific illusion bubble.

### **Fragmented thinking.**

I concentrate on Health and de-emphasise Wealth and admit I am doing comprehensive fragmented thinking to counter the government's illusion bubble.

The Government concentrates on Wealth and de-emphasises Health and will not admit it has drifted into scientifically **relative** rather than **absolute** fragmented thinking.

I feel in this highly technological age the electorate has allowed the government to have **enormous powers which neither we nor they realised**. They have the power to slowly eliminate most life on this earth with military use and civil use of modulated microwaves. In a sense they are turning people into overflowing dustbins. This is a simple analogy to represent that which Carlo's video explains in medical terms.

Although it is nice to do more research, is it not wasting money to reinvent the wheel and in some ways wasting money to gild the lily? Is it not better to read and understand the research programs already carried out about 10 years ago by dedicated scientists, as previously mentioned, namely George Carlo, who phone company employees laugh at from their warped vested interest viewpoint, and also Cherry from New Zealand, who obtained his PhD on this subject and gave a presentation to the European Parliament in 2000.

Dr J.C.Walker Chartered Physicist

There is an updated CD available with a power point display, if required, and also a set mainly of A3 laminated display data diagrams.

You can get more definitive references from the web sites given and much more detail.

**PS1.** Have western world governments opened a silent civil war against unsuspecting innocent civilians, due to technical ignorance. Is this war, war with no jaw, jaw (the subject is controversial and therefore should be avoided by universities in research, in the press and media). Are western world governments terrorists? There are leaders and followers (by respect and consensus). There is no blame on the leaders, they took the best advice at the time with a clear conscience! However they should not deny hindsight a decade later.
