

Mobiletelephones and telecommunications equipment

Mobil telephones and telecommunications equipment require an external antenna.

For your car Volkswagen has approved use of mobile telephones and telecommunications equipment under following conditions:

- The car has to have an external antenna, which has been installed correctly by professional technicians.
- The Max. transmission output of the antenna is:10 watt. Only with an extern antenna can the equipment reach optimum range.

If you wish to use a mobile telephone or telecommunications equipment with a higher transmission output than 10 watt you must contact an authorized distributor garage.

The specialized technicians will know which technical solutions there are for installation.

Installation of mobile telephones and communications equipment should always be performed by authorized garage technicians.

Preferably your Volkswagen partner.

NOTE!

Your attention must first and foremost be concentrated on your driving. If the drivers attention is diverted this can result in accidents and injury.

- Only use the telephone or telecommunications equipment when road, weather and traffic conditions allow, and when your attention will not be diverted.
- You should adjust the sound level in a way where you can always hear acoustic signals from outside, f.inst sirens from police vehicles or fire engines.
- In areas where there is insufficient or no mobile telephone connection as well as in tunnels, garages or under bridges, it will not always be possible to connect, not even for emergency:

- ***If you use mobile telephones or telecommunications equipment without an external antenna, the electromagnetic radiation inside the car can exceed the guideline limits.***

This also applies if the antenna has not been technically correctly installed.

- ***Always turn off the mobile telephone and the telecommunications equipment when you fill up the car with petrol. Because of the electromagnetic radiation, sparks can develop and cause fire.***

Note!

- Never fasten or install items (like f.inst. drinks containers, telephone holders) on or next to the airbag module covers or within the action area of the airbags → leaflet 2.1 "Safety" chapter "Airbagsystem".
- Items which are fastened to or next to the airbag module covers or within the action area of the airbags, can cause serious or fatal injury if the airbags are released.

Beware!

If work is performed on your car by non skilled personnel, function errors can occur.

If the above conditions are not followed function errors can occur in the cars electronic system.

The most common cause are as follows:

- No external antenna!
- Wrongly installed external antenna!
- Transmission Output exceeding 10 watt!

Recommendation!

- By retrofitting of electric or electronic equipment current regulation must be adhered to, otherwise in certain instances, the car no longer complies with the type approval.
- Be aware of current legislation concerning the equipment and follow information, operation and function descriptions for mobile telephones and telecommunications equipment. ◀
